

Testimonial 7 Sea Geosciences

7 Sea Geosciences provides cost effective, quality driven geotechnical, geophysical, hydrographical and construction support services to both the Terrestrial and Marine Construction and the Mining Industry.

Steve Horwood, owner of 7 Sea Geosciences, designed a jack-up barge which can be dismantled to be transported to various destinations. The barge was manufactured in Cape Town and transported in its raw form to its first destination, Walvis Bay in Namibia.

7 Sea Geosciences hired Lisa Balz to plan and optimize the packing of the various components of the barge into standard shipping containers.

Lisa managed to achieve her objective in what was a very complicated design. Most importantly she was able to draw on associates to form a team which was able to not only interpret the design drawings, but produce a full set of 3D space optimization drawings.

Lisa spend a week on site in Walvis Bay assessing the equipment and another week on site during the packing of the barge. Her involvement was an asset to the project and while most people step out of the box only when solving a problem, Lisa spends most of her time out of the box imagining space in a way most people cannot imagine.

A handwritten signature in black ink, appearing to read 'S.J. Horwood', written in a cursive style.

S.J Horwood
